

# Entrepreneurial Finance MGT 4072

David P. Adams III  
Adams Capital, Inc.  
September 28, 2015

# David P. Adams III

- Founded Adams Capital, Inc. in 1996
  - Coopers & Lybrand LLP (PWC) from 1993 to 1996
  - KPMG Peat Marwick LLP from 1988 to 1993
  
- Georgia State University, MBA
  
- Georgia Institute of Technology, BS ME
  
- Professional accreditations: CPA, ABV, ASA
  
- Over 20 years of testimony experience

# Adams Capital, Inc.

- Independent, third party valuation firm
  
- We solve problems where valuation matters
  - Accounting compliance
  - Tax compliance
  - Transaction advisory services
  - Dispute resolution
  - Gift and estate planning
  - Employee stock ownership plans
  
- Experience with over 3,000 transactions

- Practical considerations
- Macro value drivers
- Think – it is easy to model and difficult to implement
- Success depends on significant factors beyond your control
- Somebody else has the same great idea and you are in a race to be successful first
  - They have more money and customers

# Rules of thumb

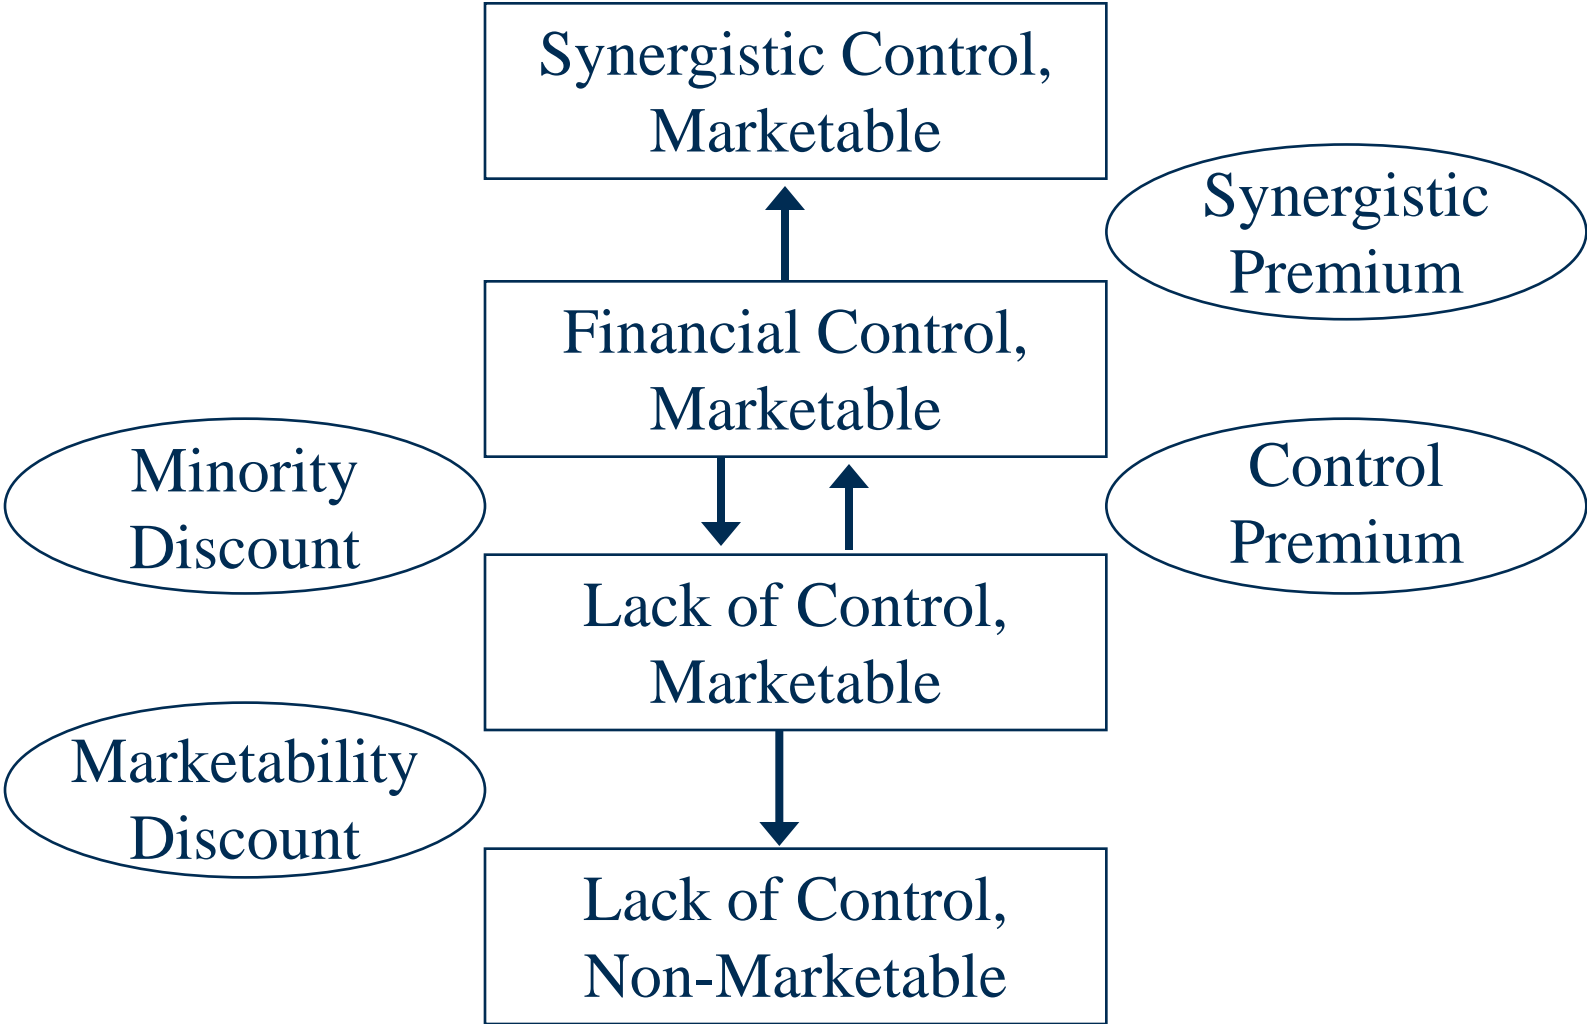

- The Siren's Song of valuation
- Revenue multiples, profit multiples, cash multiples, seller's discretionary earnings multiples, and many, many others
- Dangerously superficial – fails to distinguish more valuable firms from less valuable ones
- Sacrifice “why” a company presents a certain value

# Approaches to value

Category	Key Driver	Application
Income	Cash flow or profits, Discount rate	When the target's future performance is expected to differ greatly from its past performance as is the case with start-ups or early stage businesses.
Market	Data on multiples from actual transactions	When information on <u>truly</u> comparable publicly traded companies or recent transactions is readily available.
Asset	Value of individual assets – liabilities	When the assets <u>are</u> the business (i.e. real estate holding companies).

# Different levels of value

**Income Approach - Discounted Cash Flow Method**

Fair market value of the equity on a non-controlling, marketable basis (1)

Less: Discount for lack of marketability (2)

Fair market value of the equity on a non-controlling, non-marketable basis

**Market Approach - Guideline Company Method**

Fair market value of the equity on a non-controlling, marketable basis (1)

Less: Discount for lack of marketability (2)

Fair market value of the equity on a non-controlling, non-marketable basis

**Market Approach - Similar Transactions Method**

Fair market value of the equity on a non-controlling, non-marketable basis (1)

Less: Discount for lack of control (5)

Fair market value of the equity on a non-controlling, non-marketable basis

**Concluded Value**

Concluded fair market value of the equity on a non-controlling, non-marketable basis (6)

Total shares outstanding (7)

Concluded fair market value of a share of common equity on a non-controlling, non-marketable basis

Total diluted shares outstanding (8)

Concluded fair market value of a share of diluted common equity on a non-controlling, non-marketable basis

Date	Company	Equity	Value	Revenue	EBITDA

# Barriers to value

- Risk
  - Uncertainty of value over time
    - Amount
    - Timing
  
- Marketability
  - The desirability of the company by buyers
    - Controlling vs. Non-controlling interest
  
- Liquidity
  - The ability to buy and sell the company at will

# Managing risk

Demand	Strong, documented sales pipeline
Technology	Patents, R&D budgets and plans
Financial Risk	Hedging instruments, lines of credit, liquid assets, audit
Management Risk	Non-compete agreements, key person insurance, employee ownership
Competition	Sales contracts, recurring revenues
Legal Risk	Contracts, liability insurance, directors' insurance, settle lawsuits/disputes
Safety Risk	Safety audits, crisis contingency plans
Supplier Risk	Supply contracts, facility leases
Regulatory/Tax Risk	Good inspection/compliance records. Good tax records. Make sure all inspections and tax liabilities are current.

# Value: What is someone willing to pay?

- Who is “someone” and what are their circumstances?
  - Free to decide to buy/sell or not to buy/sell?
  - Is the asset made available to many buyers?
  - Could the buyer flip the asset at the same price quickly?
  - What was the second highest bid?
  - Is the buyer knowledgeable and privy to all relevant facts?
  - Were the terms of sale all cash?
  - Are non-financial drivers at work?

# Comparing debt vs. equity

## ■ Debt

- Lower cost (as low as 4%)
- Faster decisions
- Easy to find lenders, easy to contact lenders
- Maintain control
- Bank would like you to stay in business
- Growth capital
- Interim payments
- Need collateral

## ■ Equity

- High cost (20%+)
- Due diligence takes months
- Need introductions and connections to equity providers (or rich relatives)
- You'll be pushed to sell your business
- Development capital
- Share/concede control
- No interim payments
- No collateral
- Financing of last resort

# How expensive is equity?

- Say we raise \$1 MM in equity, and total business (post-money) is valued at \$5 MM
  - Sold a 20% stake
  - (No interest payments, no dividends)
  
- 5 years later, you sell your business at a value of \$20 MM.
  - You get \$16 MM, your investor gets \$4 MM
  - Financing cost you \$3 MM. You paid “interest” of 41%
  
- Bootstrap is a great option

# Qualitative market summary

## *Supply/Demand dynamics at work*

Stock Market Down	➡	Panic Selling	➡	Increased Business Supply
Economy Down	➡	Defensive Selling	➡	
Liquidity Down	➡	Selling to Raise Cash	➡	

Debt Financing Tight	➡	# of Buyers Down	➡	Reduced Business Demand
Stock Market Down	➡	Investable Funds Down	➡	
Economic Perception Down	➡	Risk Tolerance Down	➡	

Increased supply, reduced demand ➡ Downward value pressure

# To invest or not to invest?

- What problem are we solving?
- Are we really solving the problem?
- What is the solution worth?
- Does the buyer immediately understand the value proposition?
- How much selling is required?
- Is implementation a hurdle?
- How long is the sales cycle?

# Money, money, money

- What will it cost?
  - Time and amount
  
- How will I get my money back?
  - Cash or as other assets
  
- What return will I get on my money?
  
- How is success defined?
  
- Will success require additional investment?

# Not to invest: Barriers to funding

1. No industry experience
2. No business experience
3. No prior success
4. Poor concept
5. Large competitors
6. Significant capital requirements
7. Poor organization
8. Friends and family
9. Long sales cycle
10. Rosy forecasts

**Really better to earn your financing**

# Who is a successful entrepreneur?

- Most common denominator among Adams Capital clients
  - Previously Bankrupt (or close)
  
- Extraordinary
  - Can do
  - Motivate/lead
  - Persuasive
  - Smart
  - Unique knowledge
  - Perseverance

# Cash is king

- Surplus cash is safety
  - Not really a cost
  - Most common mistake is running out of money

# Wanna get lucky?

- Founder shares
  - Worst part of capital structure
  - Little bargaining leverage
  - Terms dictated by last investor
  - Held hostage by other investors who typically can block new investment
  
- Initial terms do not really matter as they can be modified at each new round
  
- Plan to invest proportionately at every round

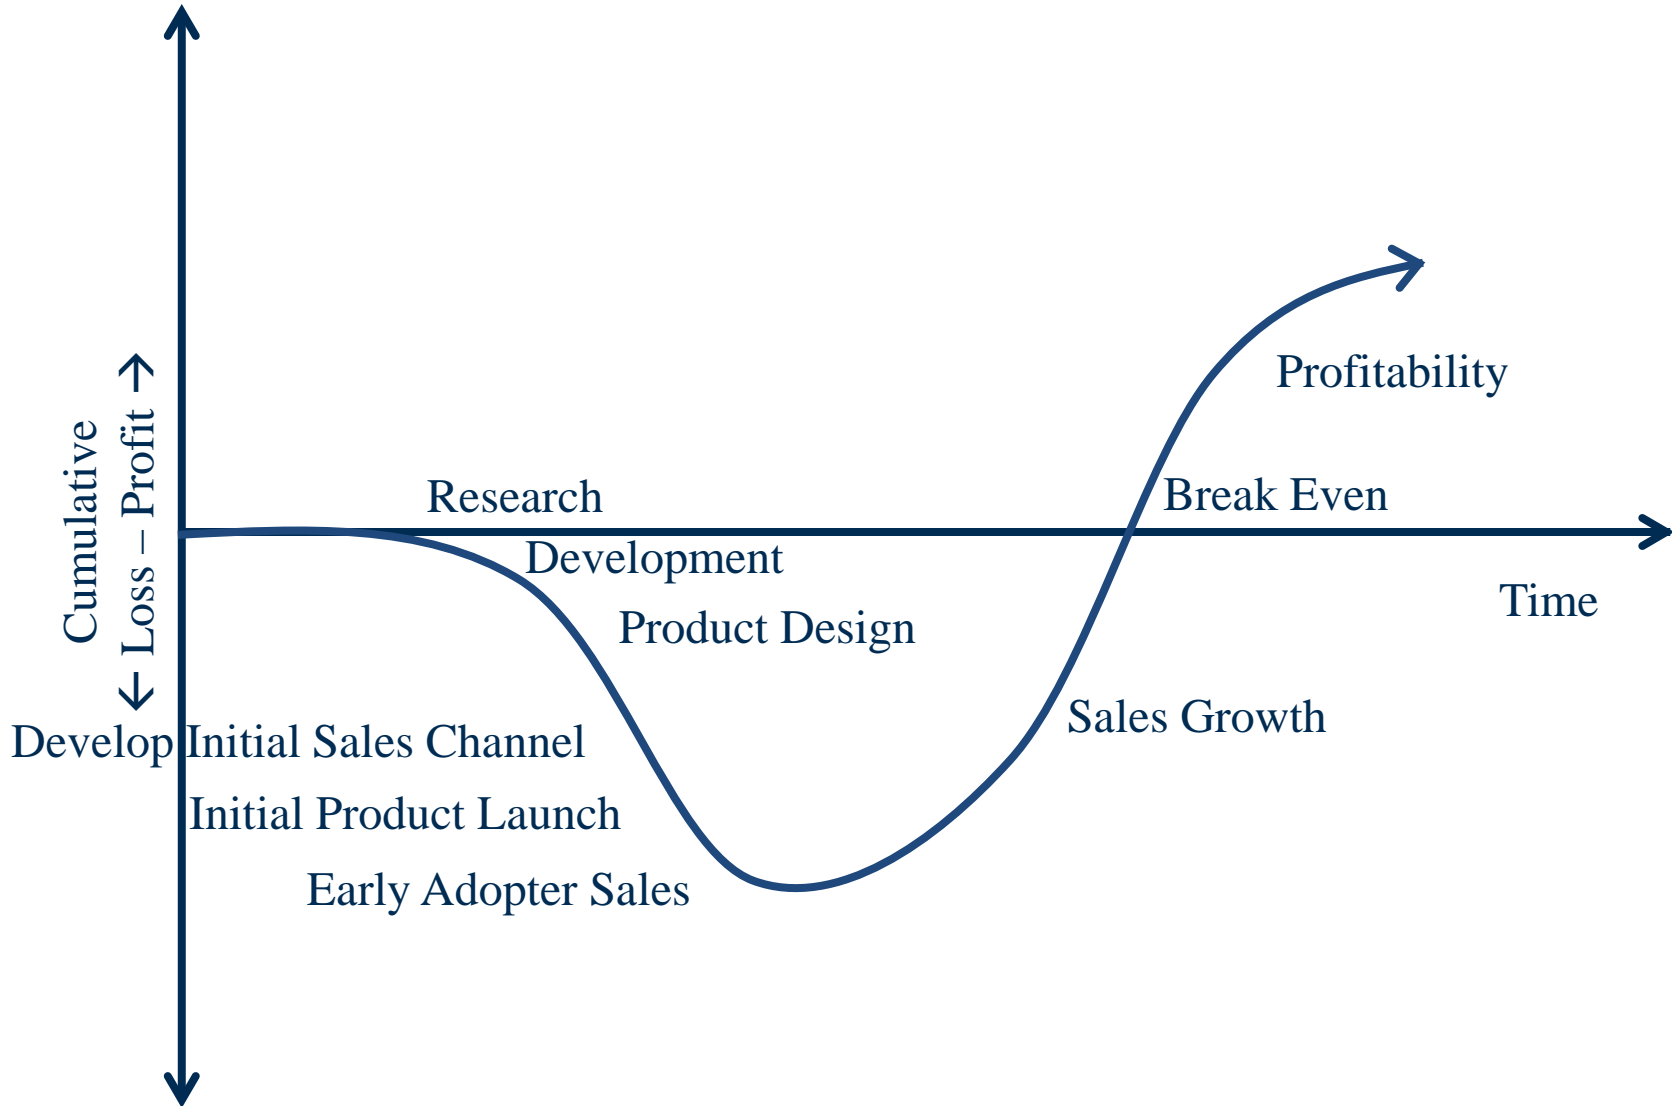

# The numbers

- Venture IRR needs to be 40-50% to meet investor expectations after covering failed investments and fees
- Results are frequently unattainable or unrealistic

# Investment perspective

- Global Economy
- US Economy (or primary market economy)
- Industry performance past and expected future
- Prior experience of investments in this area
- Fund style or experience
- Fund size
- Only 1 in 10 startups last 10 years

# Revenue View of the “Valley of Death”

# VC perspective

- Commitment to the VC investors for 20% or more total annual return
  - Consistent industry, style, size
- Complex terms designed to earn a return
- Commitment to invest consistent with style and within 1-3 years
- Harvest within 5-7 years
- Wrap up in 10 years (average 12)

# Capital structure considerations<sup>1</sup>

- Who has control and leverage of firm policy?
- Is the composition concentrated or diffuse?
- Do any investors have veto capabilities?
- Who are the holders of the securities? (banks, individuals, venture capitalists, hedge funds, friends & family)
  - Are they likely to have different objectives?
- How do they impact the overall risk of the company?

<sup>1</sup> Lurvey, David et al., *Hidden Treasures: Techniques for Valuing Distressed Enterprises*, [The Journal of Corporate Renewal](#), October, 2008 ([www.turnaround.org](http://www.turnaround.org))

# SEED CAPITAL

I'll give you the capital you need to generate revenue just as soon as you start generating revenue.

# What are equity investors looking for?

- Very high returns
  - \$1 billion market potential and exit in 5 years
- Management with experience
- Management with financial commitment
- Recurring revenue business model
  - People pay you over and over again
- “Unfair” competitive advantage
- Customer validation (sales, letters of intent, orders)
- Plan B – positive cash flow – no cost to hold

# STOCK DEALS

Nothing says "our stock is valuable" like a company that doesn't have enough cash to pay you.

# Valuing early stage ventures

- Potential market size
- Competitor capability
- Probability of success
- Management team prior experience
- Management “all in”
- Industry knowledge

# How to increase business value

- Current earnings
- Maximize sale price
- Make money immediately
- Endure long sales/business cycle
- Customer contracts
- Patented technology
- Non-compete agreement with employees
- Make your business the most attractive in your industry
  - Competitor recognition

# What are angel investors looking for?

- Return on investment
- Short investment horizon
- Specific accomplishments
- Energetic partners
- To be part of something important
- Enable success
- A challenge/job

# Lessons from investors

- Do not focus on value
  - Focus on successfully capturing the market and profit
  
- Success is valued
  - Recovering from failure is a success
  
- Focus on problem solving
  - Listen and take advice
  
- Plan to fail a few times
  - Avoid guarantees to friends and family
  - Pivot

# Lessons from investors (cont)

- Leverage your experience or expertise
  - Riskier to depend on others for core technology
  
- Do it yourself
  - Do not ask others to do things you would not do yourself (includes investing)
  
- Negotiate for win-win
  - Avoid win-lose

# Entrepreneurs

- “I need your money to see if my idea works and I expect to be paid a significant salary while trying...”
- Coachability of entrepreneur
- Likeability of entrepreneur
- Break even in 24 months or less
  - Think revenue – get to market quickly
- Small, fast-growing niche
- Bootstrap

# Recommended reading

- Security Analysis: Sixth Edition
  - Graham and Dodd

# If I were your age – Habits for life

- Communicate – take care of your relationships
  - Write frequently and carefully
  - Speak thoughtfully – remember birthdays and special occasions
  - Read books not blogs
- Health
  - Eat well - avoid junk
  - Be fit - Exercise daily, play a sport
- Savings
  - Save 10% or more of every paycheck
  - Only buy when you can pay cash
  - Never invest in a quick profit – it will be a loss
- Be a recognized expert and trusted advisor

**Thanks!**

Questions or  
Comments?

# Appendix

# Macro Investment Drivers

- $GDP = C + I + G + \text{Net exports (exports - imports)}$ 
  - C = Total consumption personal and business
  - I = Investments
  - G = Government spending
  
- Identity equation – true for all governments at all times

# Macro Economic Growth

- $\Delta \text{GDP} = \Delta \text{Population} + \Delta \text{Productivity}$ 
  - Increase working age population
  - Increase productivity
  
- Increasing working age population (demographic shifts) is demographically understood 20 to 30 years in advance
  - No real surprises expected here
  
- Increasing productivity (technology improvements) takes time and frequently results in lower prices which may add to deflationary pressure

# Macro Economic Balancing Trends

- Deflation
  - Good – increased productivity
  - Bad – lack of pricing power/lower final demand
  
- Inflation
  - Always and everywhere a monetary phenomenon (Milton Friedman)
  - Printing too much money
  
- Not inevitable but significant implications

# Deflation

- Associated with massive wealth destruction
  - Trillions in wealth has evaporated
  
- Implications:
  - Massive deleveraging, reduced lending, default, bankruptcy, restructuring, financial distress, reduces nominal value of collateral, reduces credit worthiness, and forces asset sales into falling prices

# Inflation

- Central bank can print too much money
  - Brings inflation
  - Destroys currency
  
- With deflation there is potential for printing money and still not causing inflation

© DESPAIR.COM

# INFLATION

BECAUSE THE EASIEST WAY TO STEAL YOUR WEALTH IS BY CHEAPENING YOUR MONEY.

# Keynes's Paradox of Thrift

- While good for one person to save, when everyone saves it decreases consumer spending
  - Less pricing power

# Minsky Journey (2008)

- Hedge unit – investment is its own source of repayment
- Speculative unit – investment only pays the interest
- Ponzi unit – only way to pay the debt is for the value of the investment to rise (Greece)
  - Ends in violent markets and unwanted volatility
  - Stability brings instability
- Hyman Minsky

# Balance Sheet Depression

- Private sector balance sheets
  - More liabilities than assets
  
- To credibly pay debt off the debtor has to have a well defined present value
  - Debt should be repaid if you look far enough in the future
  
- Problem with having more liabilities than you can service is that someone has to take a loss
  - Financial oppression (squeeze down/cram down)
